1. Purposes of the Handbook

This handbook provides essential information and supplementary resources to guide shortlisted teams in reviewing, implementing and evaluating/reflecting on their partnership projects for the Redesigning Student Learning Experience in Higher Education (RSLEIHE) Award Scheme 2026-27. It draws on **general policies for AI use** and the **Trio Partnership Model** proposed by Peter LAU (2026), co-developed with Edith TSO (a student partner) and other members of the UGC TDLEG-IICA project, *Exploring GenAI Use in Teaching and Learning Enhancement through a Pedagogical Partnership Approach and Collaborative Showcase* (2025–2028 Triennium; HREC Number: EA260055).

In addition, the handbook outlines **key activities**, **required documentation** and **submission dates** (see Timeline in Section 4). For further details, please refer to the Project Report Template (Appendix A1), Project Impact Summary Form (Appendix A2), Consent Forms (Appendices B–D), Idea Pitch Video Guideline (Appendix E), Views and Observations of the Adviser (Appendix F), Report Assessment Criteria (Section 5.1), Team Presentation guideline and assessment criteria (Sections 6.3-6.4).

Staff members (or project advisers) of each team will be invited to share their views and observations (Appendix F), contributing to the RSLEIHE collective reports in the later stage of the scheme.

Should you have any questions, please contact the TDLEG-IICA project Principal Investigator, Dr Peter LAU (pfmlau@hku.hk) and Project Coordinator, Ms Jessie ZHENG (zhengjh@hku.hk) at Teaching and Learning Innovation Centre, HKU.

2. Background

2.1. Redesigning Student Learning Experience in Higher Education (RSLEIHE)

The RSLEIHE is an award scheme established in 2017 by the Hong Kong Branch of HERDSA (Higher Education Research and Development Society of Australasia). It aims to promote and showcase local examples of **student-staff partnerships** in teaching and learning, also known as *Students as Partners* (SaP; Cook-Sather et al., 2014). The scheme provides a platform that engages students and staff in co-designing innovative learning experiences in response to emerging challenges in education, such as the adoption of educational technologies and pedagogical shifts during and after the COVID pandemic. In the era of Artificial Intelligence (AI), the 5th RSLEIHE calls on students and staff to collaborate in **exploring best practices for integrating Generative AI (GenAI) tools to enhance teaching and learning**.

2.2. Challenges and Opportunities in the Age of AI

Integrating GenAI into education presents “unparalleled opportunities and formidable challenges” (Bittle & El-Gayar, 2025, p.1). While GenAI offers opportunities to enrich student learning experience by enabling adaptive, responsive, and interactive learning process (Gupta et al., 2024, Bhatia et al., 2024), unintended consequences, such as *unproductive cognitive offloading* (Ahmedtelba, et al., 2025) and heightened risks of *academic dishonesty* (Bittle & El-Gayar, 2025), have made many educators hesitant to embrace it fully.

Fortunately, increasing evidence suggests that collaborative teaching practices involving teachers, students and AI tools can be effective. For example, in a study testing GenAI tools for creating reliable questions in various assessment activities at the University of British Columbia (Dehkhoda et al., 2024), the collaborative team of staff and student partners found that an iterative, guided prompting approach was beneficial for developing question variations, while direct and explicit prompts were more effective for generating accurate solutions in a university Physics learning context. Results were verified by AI specialists.

Furthermore, Creely and Carabott (2025) in Australia established an Integrated AI-Oriented Pedagogical Model for reimagining future classroom practices and teacher education. The model outlines the educational implications of GenAI in three dimensions (*Positionality of Teacher, Relationality in Pedagogy* and *Functionality of GenAI*) and advocates for practices that respect human experience while embracing the agency of AI technologies.

Taken together, leveraging GenAI within a pedagogical partnership approach fosters collaborative exploration of AI-driven solutions. This will mark a fundamental shift in how universities approach teaching: moving away from traditional top-down instruction towards a collaborative teaching model, namely, the **Trio Partnership Model**, where staff, students and GenAI tools jointly reshape learning experiences.

3. Framework and Principles for AI Use and Reflection

3.1. Trio Partnership Model (Framework)

In the briefing session, Lau (2026) described the Trio Partnership Model as a pedagogy-led, partnership-based, and AI-enhanced framework that reconceptualises learning as a collaborative, relational, and process-oriented endeavour among three interconnected partners: learners, educators, and AI tools, such as GenAI. A pedagogy-led approach begins with **redesigning** educational purposes, learning processes, and human development, and only then considers how technologies may support these goals. This contrasts with a technology-led approach, where the capabilities of new technologies often drive educational decisions and practices. Within the Trio Partnership Model, AI is not adopted because it is novel or efficient, but because it may contribute to meaningful learning, critical inquiry, and the development of learners' judgement and agency. In this sense, AI serves pedagogy rather than pedagogy adapting itself to the demands of technology.

Rather than positioning GenAI as merely a technological aid or content generator, the model views all three partners as active contributors to knowledge construction, critical reflection, and decision-making. Learning is therefore understood not as the transmission of fixed knowledge or the efficient production of correct answers, but as an ongoing process of inquiry in which meaning is negotiated, challenged, and co-created through interaction.

The emerging GenAI has created unprecedented opportunities for access to information, feedback, and idea generation. At the same time, growing concerns have been raised about the unintended consequences of over-reliance on AI in educational contexts. These include *cognitive offloading*, where learners increasingly delegate thinking processes to AI rather than engaging in deep cognitive effort (Gerlich, 2025); *diminished creativity*, as AI-generated outputs may discourage original thinking and risk-taking (Zhai et al., 2024; Bozkurt et al., 2024); *algorithmic bias, discrimination, and lack of diversity*, which can reinforce dominant perspectives while marginalising alternative voices (Bozkurt et al., 2024); *pseudo-expertise*, where users may develop an illusion of competence by reproducing AI-generated knowledge without genuine understanding (Powell, 2026); and the *homogenisation of academic voice*, whereby students' writing increasingly converges towards standardised and machine-mediated forms of expression (Chia & Tay, 2025). These challenges suggest that the central educational question in the AI age is no longer how to access answers, but how to cultivate critical thinking, ethical awareness, and meaningful participation in knowledge construction.

The Trio Partnership Model responds to these concerns by shifting the focus from an *outcome-oriented* to *process-oriented* conception of learning. Rather than evaluating learning solely through the quality, speed, or efficiency of AI-assisted outputs, the model emphasises

how understanding is developed through questioning, interpretation, reflection, negotiation, and revision. Learning is valued not primarily for arriving at the "right" answer but for developing learners' capacities to navigate uncertainty, identify hidden assumptions, evaluate evidence, exercise judgement, and engage responsibly with both human and AI partners. In this way, AI becomes a catalyst for deeper inquiry rather than a substitute for human thinking.

The pedagogical foundations of the model draw upon three complementary perspectives. First, *unknowingness as generative* (Cook-Sather, 2025) frames uncertainty not as a deficit to be overcome but as a productive condition for learning. Learners and educators are encouraged to engage constructively with uncomfortable complexity, ambiguity, and change, recognising that meaningful learning often emerges from questions without pre-determined answers. Second, *pedagogy of vulnerability* (Brantmeier, 2013) promotes openness, humility, and a willingness to acknowledge the limits of one's knowledge. In an era when AI can produce confident and seemingly authoritative responses, vulnerability becomes an important resource for resisting premature certainty and maintaining a stance of inquiry. Third, *pedagogy of care* (Noddings, 1988) provides the ethical foundation for meaningful human-AI collaboration by emphasising empathy, trust, responsibility, and mutual respect. Care ensures that learning remains a relational endeavour that attends not only to cognitive development but also to emotional and social well-being.

A distinctive feature of the Trio Partnership Model is the dynamic movement between contributor and observer roles through what may be described as the "third eye" perspective. At any given moment, when two partners engage directly with one another, the third partner occupies a reflective vantage point that observes, interprets, questions, and evaluates the interaction. Rather than functioning as a passive observer, the third eye makes learning processes visible by identifying assumptions, highlighting tensions, offering alternative interpretations, and facilitating metacognitive reflection. At times, the third eye may also act as a mediator that challenges reasoning, supports decision-making, or introduces new perspectives to enrich the discussion.

For example, when a learner and AI interact directly, the educator can assume the role of the third eye by helping students evaluate the quality of AI outputs, interrogate prompts, identify biases, and reflect on their reasoning processes.

Conversely, when a learner and educator engage in dialogue, AI may operate as the third eye by generating alternative viewpoints, surfacing overlooked evidence, or identifying patterns/consistency that stimulate further reflection.

Equally important, when an educator and AI work together while students observe, students become the third eye. This configuration is particularly valuable because it makes expert thinking visible. Students can observe how educators formulate prompts, critique AI-generated responses, reject inadequate suggestions, navigate

uncertainty, and exercise professional judgement. Rather than presenting expertise as a possession of definitive answers, the process models intellectual humility and critical engagement. Students learn not merely from what the educator knows, but from how the educator thinks with and against AI.

To conclude, the Trio Partnership Model reframes learning as a pedagogy-led, partnership-based, and AI-enhanced process of inquiry, reflection, and meaning-making among learners, educators, and AI. Rather than treating AI as a tool for optimising answers or automating thinking, the model positions it as a partner in a collaborative learning process that supports questioning, interpretation, and critical reflection. Learning is therefore understood not as the efficient production of outcomes, but as the ongoing development of judgement, agency, and responsible participation in knowledge construction.

In this process, authority and expertise are not concentrated in any single partner. As learners, educators, and AI move fluidly between contributor and observer roles, knowledge generation becomes a shared endeavour characterised by reciprocity, dialogue, and mutual learning. Such partnership is particularly important in the age of AI, where rapid technological change presents uncertainties, challenges, and opportunities that none of the partners can fully navigate alone. Instead, learning becomes a process of co-navigation, in which participants collectively examine assumptions, evaluate alternatives, and construct shared understanding.

By placing meaning-making, relationship-building, and critical engagement at the centre of educational practice, the Trio Partnership Model seeks to preserve and strengthen distinctly human capacities within AI-supported learning environments, including ethical reasoning, creative interpretation, empathy, and the ability to engage thoughtfully with complexity and change. In this way, the model offers a practical framework for fostering more equitable, reflective, and resilient educational communities in an AI-enabled world.

3.2. General Principles for AI Use

Across Hong Kong universities, the common principles of AI use in education and research can be summarised as:

1. **Integrity** — Your work must remain your own; disclose AI use.
2. **Transparency** — Cite AI tools and document how they were used.
3. **Ethics** — Use AI responsibly, safely, and with respect for privacy.
4. **Criticality** — Evaluate AI outputs with scepticism and disciplinary judgment.
5. **Human-Centredness** — Preserve human creativity, reasoning, and uniqueness.
6. **Compliance** — Follow course level rules and teacher instructions, if applicable.
7. **AI Literacy** — Build skills to use GenAI effectively and thoughtfully.
8. **Fairness** — Ensure equitable access and uphold fairness in assessment.

Participating teams are responsible for ensuring that their project complies with their own universities' policies, such as GenAI use regulations, teaching and learning guidelines, assessment policies, ethical approval requirements, etc. Teams are strongly encouraged to consult and follow their institutional guidelines on the pedagogical use of GenAI. Here're some useful links that you might start to explore.

3.3. Guide for Reflection

To strengthen the reflective component of your RSLEIHE partnership project, teams are encouraged to draw on two recently validated instruments in AI-education research: the *AI Ethical Reflection Scale* (AIERS) and the *AI Motivation Scale* (AIMS). While you are not required to administer these scales formally, their conceptual frameworks offer useful lenses for reviewing your project design, implementation, and impact.

Reflecting on Ethical Dimensions of Your Project

The AI Ethical Reflection Scale (AIERS) provides a structured way to think about how students and staff engage ethically with AI. The scale conceptualises ethical reflection across three dimensions:

1. **AI Ethical Awareness** — recognising ethical issues such as transparency, fairness, privacy, responsibility, and non-maleficence.
2. **AI Critical Evaluation** — assessing the credibility, bias, and appropriateness of AI outputs.
3. **AI for Social Good** — prioritising and acting on ethical principles to ensure AI contributes positively to society.

Teams may use these dimensions to reflect on questions such as:

- How does our project help students recognise and articulate ethical issues in AI use?
- In what ways does our design encourage critical evaluation rather than uncritical reliance on AI tools?
- Does our project promote socially responsible or community-beneficial applications of GenAI?

These prompts can support deeper reflection in your Project Report, Impact Summary, and Team Presentation.

Reflecting on Student Motivation to Learn with AI

The AI Motivation Scale (AIMS) is grounded in Self-Determination Theory (SDT) and identifies five types of motivation relevant to AI-supported learning:

1. **Intrinsic Motivation** — learning with AI because it is enjoyable or interesting.
2. **Identified Regulation** — recognising the personal value or usefulness of AI.
3. **Introjected Regulation** — using AI due to internal pressure (e.g., guilt, obligation).
4. **External Regulation** — using AI due to external demands or rewards.
5. **Amotivation** — lacking intention or perceived value in learning with AI.

These categories can help teams reflect on:

- What types of motivation does our project cultivate?
- Are students engaging with AI because they find it meaningful, or because they feel pressured?
- How does our project environment (support, norms, facilitation) influence motivation and engagement?
- Using these motivational lenses can enrich your evaluation of student learning experience, partnership dynamics, and project impact.

4. Timeline (2026-2027)

Year	Dates	Activity
2026	2 March – 10 April (12 April)	Call for Project Proposal
	18 March	Online Briefing Session
	April-May	Proposal Review and Feedback Result Announcement and Project Team Confirmation
	6 June	Design Sprint: Co-creation training programme
	July – August	Project development and preparation
	September – November	<i>Optional:</i> Online Activities 1. Student-Staff Partnership x AI in the Higher Education Seminar Series 2. Consultation Sessions
	September – December	Project Execution and Evaluation
	December	Project Written Report Preparation
	29 December	Project Written Report Submission, including: 1. Project report template (Appendix A1) 2. Project impact summary form (Appendix A2) 3. Consent to publish (Appendix B) 4. Information form for symposium programme, award certificates & publication (Appendix C) 5. Group photo (Appendix C) 6. Photo, video and sound recording release & consent form (Appendix D) <i>Optional:</i> Idea Pitch Video (2-min, Appendix E)
Year	Dates	Activity
2027	January – February	Project Report Review Team presentation preparation <i>Optional:</i> Call for Reflection to special issue in May 2027 (TBC)
	Saturday, 27 February	Team presentation at the 5 th Symposium on Redesigning Students Learning Experience in Higher Education and Awards Presentation
	March	Teams revise written reports in March
	28 March	Final report submission for publication Project staff members submit Views and Observation (Appendix F)
	April – June	Publication copyediting, layout design and publish

5. Project Report

Distinguished Awards will be assessed based on the overall quality of **written project report** (to be submitted by 29 December 2026) and the **team presentation** (delivered at the RSLEIHE Symposium on 27 February 2027). See the assessment criteria in the following section.

5.1. Assessment

Assessment Criteria	Descriptions
Clarity of the reporting contents	• Project content — Provide a concise explanation of the project's rationale, objectives, expected outcomes, methodology, findings, evaluation, and other essential supporting details. • Process transparency — Clearly describe who did what and how throughout the project process. • Accurate figures — Who were your participants? Include precise numbers (e.g., activity participants, students/teachers reached directly or indirectly). • Presentation of results — Present results and findings concisely using appropriate formats such as tables or graphs. • Adherence to limits — Strictly follow the word and page limits specified in the report template. • APA compliance — Apply APA 7th Edition consistently throughout the report. • Review scope — Only the content included in the report and appendices will be reviewed. Content contained in external hyperlinks will not be considered.
Evidence-based arguments & discussion	• Justification of claims — Substantiate major claims (e.g., achievement of project objectives) with empirical, authentic evidence collected within the project implementation (September-December 2026). • Use of literature — Support key arguments with appropriate scholarly literature or credible sources. • Logical discussion — Provide a coherent and logical discussion of major results and findings to arrive at meaningful conclusions and concrete recommendations.
Reflection on learning	• Project appraisal — Critically evaluate the overall achievements and limitations of the project, including the respective roles and contributions of students, staff, and GenAI partners. • Alternative approaches — Suggest <i>what, how, and when</i> the team might have acted differently to strengthen the project's success. • Long term impact — Explain the impacts and potential long-term benefits on enhancing student learning in higher education.

5.2. Submission

Project Report Template in MS Word (Appendix A) must be used. Please submit the full project reports and the required documents (including consent forms mentioned in the Timeline section) to Dr Peter LAU (pfmlau@hku.hk) and Ms Jessie ZHENG (zhengjih@hku.hk) on or before **29 December 2026**.

6. Symposium

6.1. Information for Symposium Programme, Awards, Certificates and Publications

For us to introduce the projects and team members in the Symposium Programme, please fill out the *Information Form for Symposium Programme, Award Certificates & Publication* (Appendix C) and provide a group photo. For the purpose of publication in future, each project team member should submit a completed *Consent Form for Photo, Video and Sound Recording Release/Dissemination* (Appendix D). All the forms and photos should be sent to HERDSA HK Branch via email on or before **29 December 2026**.

6.2. Symposium arrangement

All team members are cordially invited to present the projects to university students and teachers in the 4th *Symposium on Redesigning Student Learning Experience in Higher Education* to be held on **Saturday, 27 February 2027 (time to be confirmed) at Hong Kong Baptist University**. Details will be announced in due course. You are most welcome to invite your teachers and fellow students to join you in this Symposium.

6.3. Team Presentation Guideline

- 10-minute is allocated for each presentation including a 2-minute Q&A
- Pre-recorded presentation is not accepted
- Presentations are expected to be engaging and innovative
- Team work should be demonstrated
- Effective use of multimedia contents is recommended
- All teams must follow the instructions provided by the master of ceremony in the symposium
- Rehearsal is critical to master different aspects of the presentation

6.4. Assessment Criteria of the Presentations

The presentation will be assessed according to the following criteria:

- The project is clearly presented within the limited time provided
- Project success is critically evaluated and the learning achievement is shared
- The presentation is highly engaging to maintain participants' attention
- The implications of the project are specified and lead to concrete recommendations

7. Publication

7.1. Feedback on the Report and Presentation

Each team will receive feedback on their project report and presentation by **Friday, 19 March 2027**. Please work with your adviser(s) to go through the feedback from the reviewers and symposium participants. It is important to understand what aspects are done well and less well, particularly on the improvement of the project for future reference.

A project team reflection meeting is highly recommended. In the meeting, an important discussion item for the team members and the adviser(s) should be how to revise the project report for publication.

7.2. Project Report Revision

Based on the feedback on the project report and presentation as well as the questions asked by the participants during your presentation, the teams need to revise the project report and submit it for publication by **Wednesday, 31 March 2027**. The revision should address every aspect of the feedback. Unsatisfactory revised reports will be returned to the team for further revision.

7.3. Adviser's Views and Observation

In the publication, apart from project reports, there will be a section *Project Advisers' Views & Observations*. Advisers are invited to write about 150 words to share with us their observation and views on the projects. Please refer to Appendix F for more illustration.

Project Report Template

Project Title:

Project Title No More Than 12 Words

Author(s):

SURNAME Firstname, FAMILYNAME Givenname, and CHAN Peter

Affiliation:

University Name

1. Project Rationale and Objectives (80 - 100 words)

What drove the need for this project? How could the project articulate its importance for student learning in higher education? What did you plan to achieve by the end of this project? What were the expected outcomes/deliverables?

2. Project Methodology/Process (200 - 300 words)

What was/were the educational intervention(s) intended in this project (i.e. steps involved to achieve the expected outcomes/deliverables)? The steps should be described with sufficient details. Please refer to the GREET checklist in [7.6 Research Methodology/Process](#). (75-150 words)

What was the evaluation research design? Who were your participants and how would you describe them in terms of sample size (e.g. $n=40$) and their demographics (e.g. year of study, gender, ethnic group)? (75-100 words)

How did you operationalise or quantify your evaluation outcome(s)? What research instrument(s) was/were employed and why? For example, students' self-efficacy towards independent learning was assessed with the 58-item *Self-directed Learning Readiness Scale* (Guglielmino, 1978). The scale was selected because ... (50-100 words)

3. Project Results, Findings and Evaluation (400-500 words)

What kinds of empirical/authentic evidence were collected to demonstrate the success of the intervention in the project? How did you analyse the data? What were your major results and findings? (250-300 words)

How did you evaluate the overall success of the project (in particular its design and implementation)? What are the strengths and limitations of your project? Please suggest “what, how and when” the team would have done differently to make the project more successful. (150-200 words)

4. Project Impact and Student Learning (200 - 250 words)

In which course(s) and/or program(s) the project had an impact on and in what ways learning and teaching has been enhanced? (100 to 130 words)

What was the most significant learning for the project team? To what extent the student members in the team and the student participants have performed the role of “student partners” in this project? For the role of “student partners”, please see *7.1 Student-Staff Partnerships/Students as Partners in Higher Education*. What were your achievements and challenges when performing that role? How could the total experience in this project bring forward to the team members’ future learning? (100-120 words)

5. Implications and Recommendations for Learning & Teaching in Higher Education (150 - 200 words)

What are the implications of your project? Based on your project, what recommendation would you suggest for redesigning the learning and teaching in higher education so that students are provided with an optimal learning environment that can promote student engagement, self-directed learning, and relevant learning that meet their needs in life and career?

References:

Please use APA style 7th edition.

Appendices:

To keep the written report concise, consider using Appendices (a maximum of 5 pages in total) to present supplementary information, for example,

- Project timeline, instruments (such as survey items, interview questions, etc.)
- Analysis and results details (such as data in table/chart forms, student quotes, etc.)
- Supplementary materials (such as new guideline created, sample works, etc.)

Name appendices by number (e.g., Appendix 1, Appendix 2, etc.).

Appendix A2

Project Impact Summary Form

To facilitate the evaluation of the overall impact of the RSLEIHE Scheme, each project team is required to submit a completed this form (Appendix A2) together with the written report (Appendix A1). The form collects standardised information on project participation, reach, outputs, impact indicators, and representative student quotations. Information provided may be aggregated for institutional, TDLEG project report, symposium, publicity, and publication purposes. **Only report activities delivered in September-December 2026 and the relevant figures.**

Project Title:

Project Title No More Than 12 Words

Project Focus

Please add a “√” to indicate the areas below that your project was designed to address.

Student Development	
☐	Student Engagement
☐	AI Literacy
☐	Critical Thinking
☐	Ethical or Responsible Use of AI tools
☐	Other: Please specify
Teacher Development	
☐	Teacher AI Literacy
☐	Innovative Teaching Practice
☐	Other: Please specify

Curriculum/Assessment Development	
☐	Formative assessment
☐	Personalised feedback
☐	Assessment Redesign
☐	Activity Redesign
☐	Curriculum Redesign
Others	
☐	Academic Research
☐	Policy of AI Use
☐	Other: Please specify

Project Implementation and Outputs

Please add “√” to indicate the activities conducted, and report number if applicable.

Activity	Number
☐ Workshop(s)	
☐ Training Session(s)	
☐ AI Literacy Initiative	
☐ Teaching Resource Development	
☐ Assessment Redesign	
☐ Learning Activity Redesign	
☐ Research / Evaluation Study	
☐ Community of Practice	
☐ Other: Please specify	

Outputs	Number
☐ Teaching resources/guides	
☐ AI prompts/templates developed	
☐ Video created	
☐ Websites/platforms developed	
☐ Presentations delivered	
☐ Focus group/interviews conducted	
☐ Survey responses collected	
☐ Publications produced	
☐ Other: Please specify	

Participation and Reach

Indicator	Number of participants
Student project team members	
Staff project team members	
Student participants directly involved in the above-reported activities	
Staff participants directly involved in the above-reported activities	
Courses/programmes impacted	
Estimated students reached indirectly*	
Estimated teachers reached indirectly*	

***Indirect reach:** Individuals who did not directly participate in the project activities but were exposed to, benefited from, or had access to the project's outputs, resources, findings, or redesigned learning experiences (in September-December 2026). Examples include:

- Students enrolled in courses where project-developed resources, activities, assessments, or AI guidelines were implemented. **Please specify if participants/audiences were not university students.**
- Students who accessed project websites, videos, guides, toolkits, or learning materials.
- Teachers who received, adopted, or were informed of project outcomes through dissemination activities, presentations, workshops, newsletters, communities of practice, or institutional sharing.
- Audiences reached through project showcases, symposium presentations, publications, or online dissemination, social media, mass media, blogs or website.

Teams should provide a reasonable estimate and briefly explain the **basis of indirect reach estimate**. Provide an itemised breakdown where applicable.

e.g., The AI learning guide was distributed to all 420 students enrolled in the course. Although only 38 students participated in focus groups, all enrolled students had access to and were encouraged to use the resource.

Student Voices (please provide one or two short quotations from student participants):

Quote 1:

Quote 2:

Staff Voices (please provide one or two short quotations from staff participants):

Quote 1:

Quote 2:

In 50 words, what was the most significant impact of this project on teaching and learning?

Consent to Publish

Title of the Book : Redesigning Student Learning Experience in Higher Education – HERDSA HK Student Project Report

Publisher : Higher Education Research and Development Society of Australasia (Hong Kong Branch)

Editor-in-chief : Dr Anna S F KWAN

Title of Contribution : _____

First Author's name : _____

Other Authors' names : _____

1. Rights Granted

The Authors grant the Publisher the sole and exclusive license of the full copyright in the Contribution. The Publisher shall have the exclusive right throughout the world to publish and sell the Contribution in all languages, in whole or in part, as a book and in any other form including but limited to digital file, and all forms of electronic publication now known or hereinafter invented.

2. Warranties

The Authors warrant and represent that the Contribution does not infringe upon any copyright or other rights, and that it does not contain infringing, libellous, obscene or other unlawful matter, that the Authors are the sole and exclusive owner of the rights

herein conveyed to the Publisher. The Author guarantees that the Contribution to the Work has not been previously published elsewhere.

The Authors will indemnify the Publisher for, and hold the Publisher harmless from any loss, expense or damage occasioned by, any claim or suit by a third party for copyright infringement or arising out of any breach of the foregoing warranties as a result of publishing the Contribution.

The Corresponding Author declares that any person named as co-author of the Contribution has agreed to be named and the Contribution shall be delivered to the Publisher free of charges.

3. Rights Retained by Author

After publication, the Authors have the right to (a) create a compilation of own works in any form, (b) quote the Contribution, (c) build on the content of the Contribution, and (d) include the Contribution in lectures and presentations.

Signature of First Author:

Appendix D

Consent Form for Photo, Video and Sound Recording Release/Dissemination

Without expectation of compensation or other remuneration, now or in the future, I hereby give my consent to Higher Education Research and Development Society of Australasia (HERDSA) Hong Kong Branch, its affiliates and agents, to take and use photographs, video or sound recordings of me in its publications, advertising or other media activities (including the Internet). This consent includes, but is not limited to:

1. Permission to photograph and make video/audio recordings of my image, likeness, appearance and voice;
2. Permission to use my name; and
3. Permission to use the photographs and video/audio recordings of my image, likeness, appearance and voice, in part or in whole, in its publications, in newspapers, magazines and other print media, on television, radio and electronic media (including the Internet), in mailings for educational and academic purposes.

This consent is given in perpetuity, and does not require prior approval by me.

Name : _____

Signature : _____

Affiliated Institution: _____

Date : _____

Notes: Each team member should submit one consent form.

Appendix E

Idea Pitch Video Guideline

An idea pitch video can be a powerful way to showcase your project vision and demonstrate the potential impact of your project. It is also helpful in promoting your project **and attracting more public votes for the People's Choice Award at the Symposium**. Each team is encouraged to prepare an idea pitch video based on the suggestions of this guideline.

1. Content to be included:

- Clearly articulate the purpose of the project.
- Highlight the gap or room for improvement identified in the current context of the project.
- Explain the unique design to address the issue(s) of the project.
- Highlight of development and deployment of the project.
- Reflection on Student Partnership experience in the project.

2. Guiding questions to address the content:

- What is the most significant gap in the existing setting or underlying that led you to initiate this project?
- What is the rationale of your project? What problem are you trying to solve, why it matters, and whom it affects?
- What does the team want to achieve through the project?
- In what aspect(s) does the project help tackle the identified issue(s)?
- What specific feature(s) or element(s) of your design make(s) it effective and feasible in addressing the current limitation? Why is it innovative or unique?
- What are some of the key decisions you have made during the design process? What are the considerations?
- What are the outcomes and impact of your project? How are they measured and evaluated?
- How does partnering with students/staff help to address the challenge(s) or issue(s) arisen during the project?
- What benefits did you see from partnering with students/staff in your project?
- Any impact on the growth of the student partners?

3. Video requirements:

- Duration: No longer than **2 minutes**.
- Medium of delivery and subtitle: English
- Export format: MP4/MOV
- Minimum resolution: 1080p (1920x1080)
- Aspect ratio: 16:9 (widescreen horizontal)

4. Audio requirements:

- Voice track: Clear and crisp sound. The recording location is free from background noise.
- Levels: Audio levels are consistent throughout the video.
- Background music (optional): Royalty-free.

Team information:

The organiser will include your team number, members' names, affiliations, and project topic in a separate video intro, please confirm the information in Appendix C.

Submission:

The idea pitch video submission is optional. For the teams intended to submit the video, please send a **download link** to Ms Jessie ZHENG (zhengjh@hku.hk) by **Tuesday, 29 December 2026 (HKT)**.

Contact Information:

For inquiries on idea pitch video, please contact Ms Jessie ZHENG (zhengjh@hku.hk).

Appendix F

Views and Observations of the Adviser(s)

In the upcoming publication, we will include a section titled *Project Advisers' Views & Observations*. We would be grateful if you could contribute approximately 150 words to share your reflections on the project(s). You are welcome to focus on any aspects you find meaningful and surprising.

The following guiding questions may help shape your response:

1. In your view, how has the RSLEIHE Scheme, either as a whole or through your specific project, supported improvements in learning and teaching in higher education, particularly in the AI era?
2. Based on your observations, what have students (both project team members and other participants) learned through the project process? How have these experiences contributed to their development or informed your teaching practice in the age of AI?
3. RSLEIHE emphasises *Student–Staff Partnership/Students as Partners*. To what extent did your students act as “Student Partners” in this project? Did they demonstrate additional roles? You may refer to the [Six-stage Student Partnership Identity Development Framework](#) (Lau & Zheng, 2025, p.8)
4. Feel free to include any other noteworthy or unexpected observations.

We would also like to include your recent photo in the publication. If you are comfortable with this, please share a photo with us.
